Subject : Technical Analysis

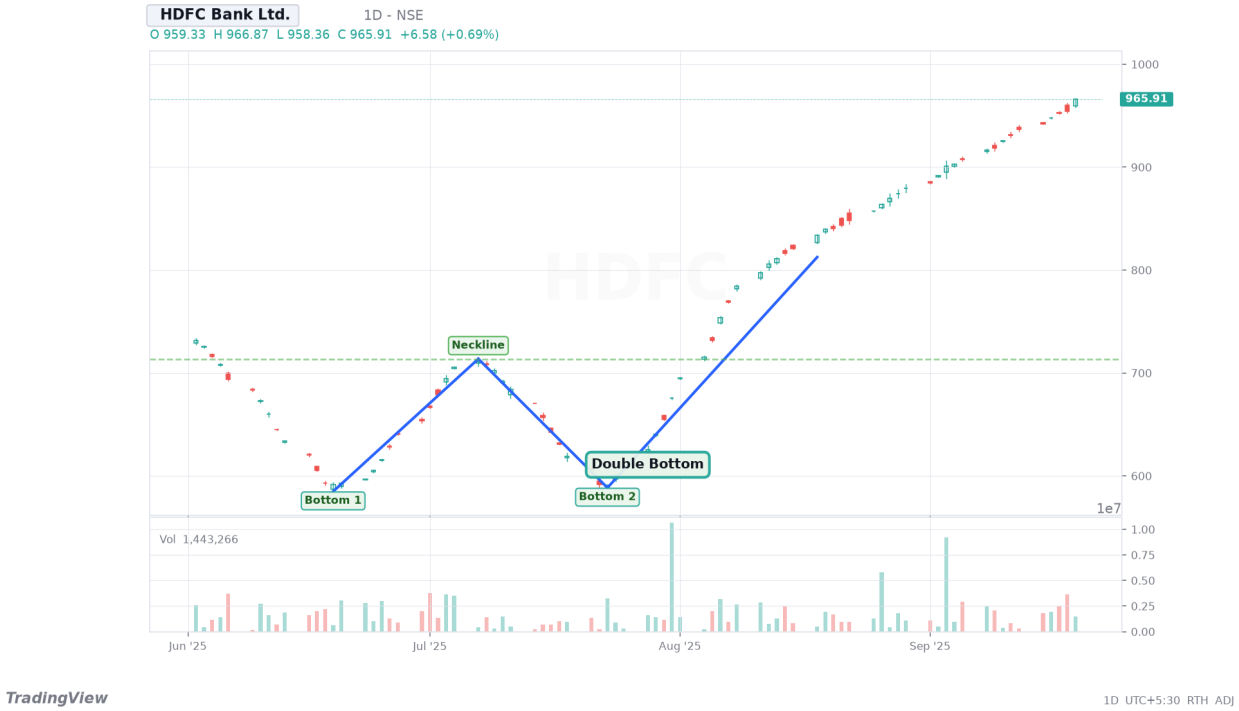

Double Top

A bearish reversal pattern where price hits resistance twice at similar levels, forming an "M" shape. The pattern completes when price breaks below the neckline (trough between the two peaks), signaling a potential downtrend.

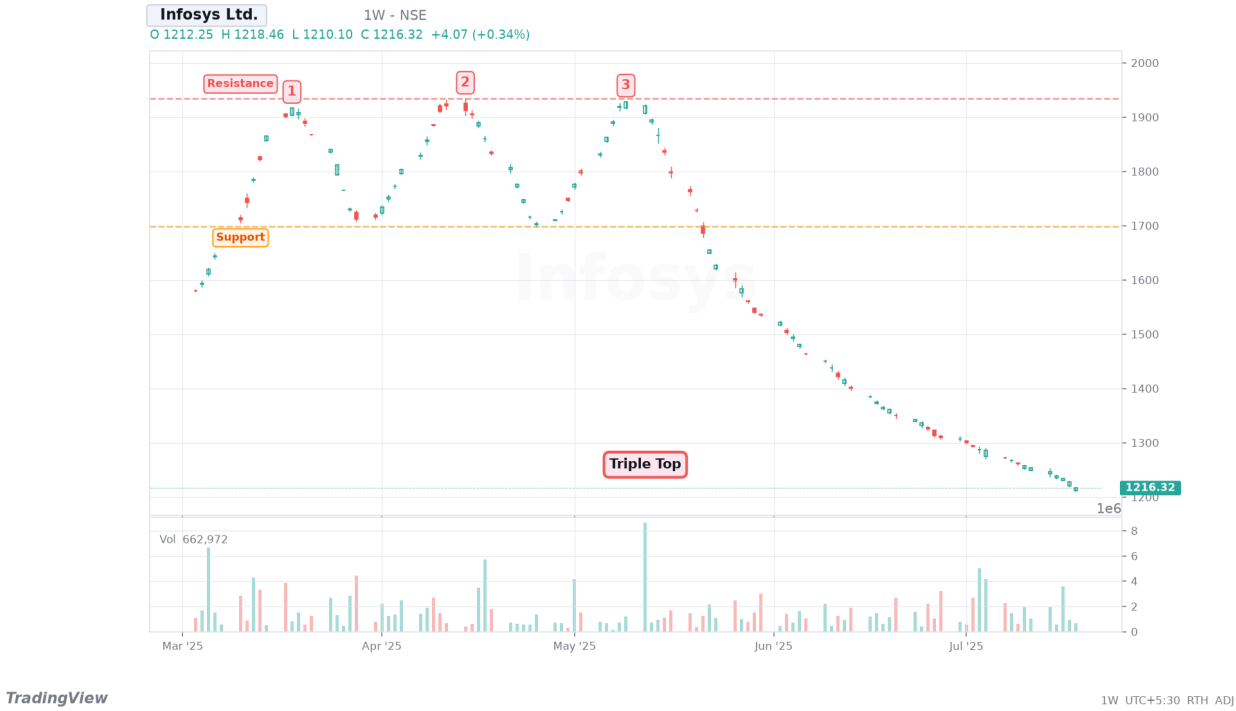

Double Bottom

A bullish reversal pattern where price hits support twice at similar levels, forming a "W" shape. The pattern completes when price breaks above the neckline (peak between the two troughs), signaling a potential uptrend.

Triple Top

A bearish reversal pattern with three peaks at similar resistance levels. Each failed attempt to break resistance confirms selling pressure. The pattern completes when price breaks below the support/neckline.

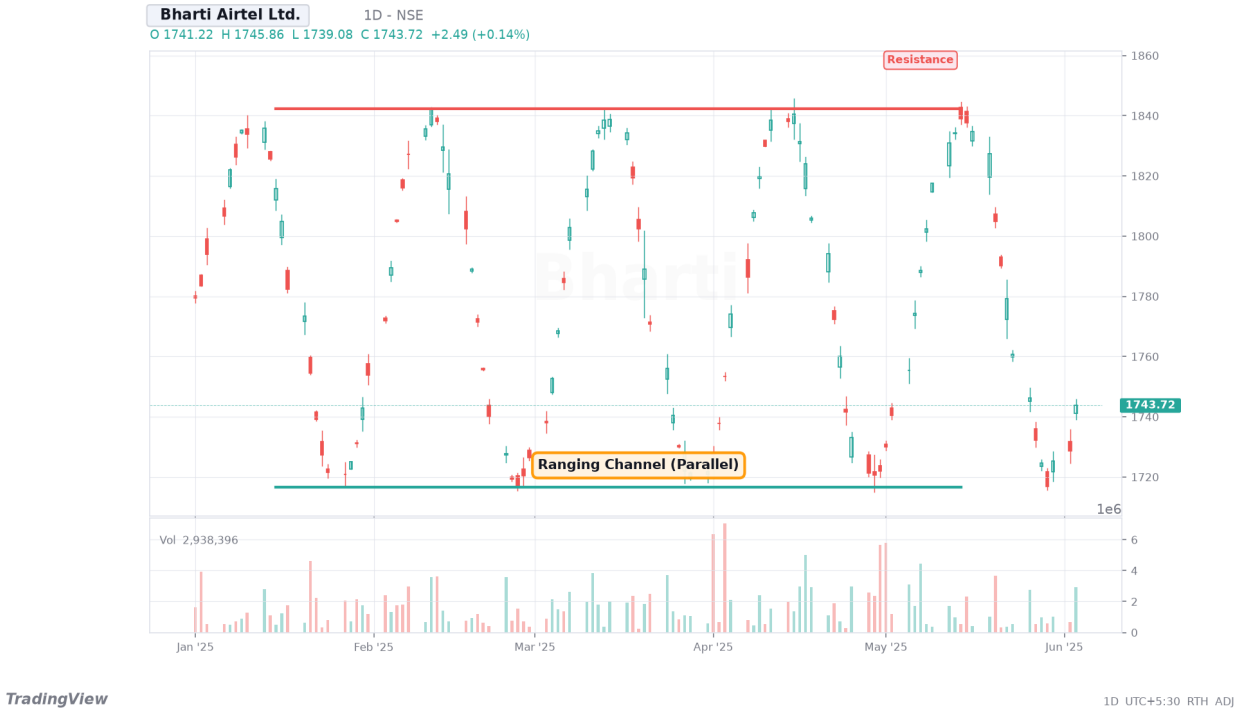

Triple Bottom

A bullish reversal pattern with three troughs at similar support levels. Each bounce off support confirms buying interest. The pattern completes when price breaks above the resistance/neckline.

Rectangle (Trading Range / BOX)

A continuation/consolidation pattern where price oscillates between parallel horizontal support and resistance lines, forming a rectangular trading range. Breakout direction determines the next trend.

Descending Triangle

A bearish continuation pattern with a flat horizontal support and descending resistance (lower highs). The contracting range typically resolves with a breakdown below support.

Ascending Triangle

A bullish continuation pattern with a flat horizontal resistance and ascending support (higher lows). The contracting range typically resolves with a breakout above resistance.

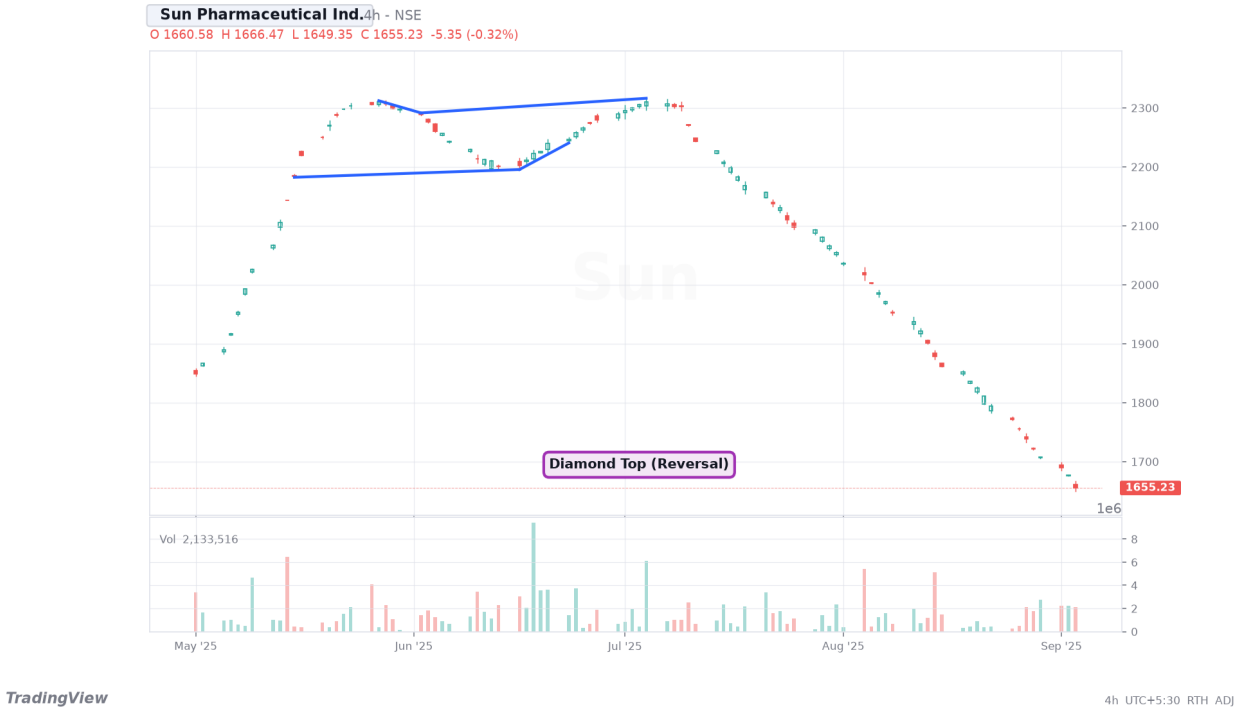

Symmetrical Triangle

A continuation pattern with converging trendlines of lower highs and higher lows. Price range narrows toward the apex, indicating indecision before a breakout in the direction of the prevailing trend.

Diamond Top

A rare reversal pattern resembling a diamond shape, formed by an expanding pattern (diverging trendlines) followed by a contracting pattern (converging trendlines). Signals a bearish reversal after an uptrend.

Wedge

A pattern with two converging trendlines sloping in the same direction. A Rising Wedge (both lines slope upward, converging) is bearish. A Falling Wedge (both lines slope downward, converging) is bullish.
