Semester : 3

Subject : Technical Analysis

Double Top

A bearish reversal pattern formed after an uptrend where price reaches a resistance level twice, creating two peaks at approximately the same level, followed by a decline below the neckline (support).

Double Bottom

A bullish reversal pattern formed after a downtrend where price reaches a support level twice, creating two troughs at approximately the same level, followed by a breakout above the neckline (resistance).

Triple Top

A bearish reversal pattern where price tests a resistance level three times without breaking through, forming three peaks at similar levels before declining below the support/neckline.

Triple Bottom

A bullish reversal pattern where price tests a support level three times without breaking through, forming three troughs at similar levels before breaking above the resistance/neckline.

Rectangle (Trading Range / BOX)

A continuation pattern where price oscillates between horizontal support and resistance levels, forming a rectangular trading range or box pattern.

Descending Triangle

A bearish continuation pattern characterized by a flat horizontal support level and a series of lower highs forming a descending trendline. Typically breaks down below support.

Ascending Triangle

A bullish continuation pattern characterized by a flat horizontal resistance level and a series of higher lows forming an ascending trendline. Typically breaks out above resistance.

Symmetrical Triangle

A continuation pattern formed by converging trendlines of lower highs and higher lows. The decreasing range indicates indecision before a breakout in either direction.

Diamond Top

A rare bearish reversal pattern that resembles a diamond shape, formed by a broadening pattern followed by a symmetrical triangle. It signals a potential trend reversal from bullish to bearish.

Wedge

A pattern where converging trendlines slope in the same direction. A Rising Wedge (bearish) has both lines sloping up with convergence, while a Falling Wedge (bullish) has both sloping down.
